~~Paraphrase viewed from above is from base of shape, head set forward, not protruding, front 2/5 of the way back. The head is conical, conical, flat on sides, the snout is flattened down by the horny sheath, the jaws are straight-edged and unhooked, the lower jaw enclosed by the bone of the upper when the mouth is closed. Eyes prominent surrounded in a circle of skin unprotected by plates (p. 82)~~

[Faint, mostly illegible handwritten text, possibly describing a specimen or location.]

There were ^{some} given upon the jaw.

Halassochelys carotta (L. 77)

[Faint handwritten text, possibly describing the specimen's origin or collection details.]

~~Total length 85 mm, ...~~
~~...~~
~~...~~
~~...~~
~~...~~

From ... (chord) ...
 following curve, 230;
 ... to posterior border
 of plates (chord) 165, following
 curve, 195; greatest circumference
 of head 145; greatest width 92

Four limbs protected by developed as elongated, pointed, flattened plates for swimming, and armed with 2 nails or claws. The legs also developed as swimming fins, but bearing more resemblance to the hind feet of the terrestrial species. They are also armed with 2 small claws like the shrimp tail beyond the posterior border of the carapace.

The plastron covers about 2/3 of under surface, is produced forward, attached to the carapace by three marginal plates, the shell is convex, rounded behind, and is pushed

forward from the marginal attachments to the carapace. It is composed of 18 marginal and 14 central plates. The shell is shallow posteriorly, the sides shallow and blunt on the sides, and the shell nearly smooth in front. It is composed of 28 marginal plates of 5 median and 5 lateral plates on each side, making a total of 38.

The dorsal carapace first ascends then evenly declines posteriorly until the marginal plates are reached when it declines abruptly. The carapace is about as high as broad, but laterally flattened posteriorly.

HIGH
Dependence
 By Julie M. Lippmann

HIGH heaven stoops to draw the ocean-mist,
 The lowly land looks skyward for its rain ;
 The seasons need the sun to keep their tryst ;
 Deep-hidden well-springs feed the dour world glad again.
 The river slakes its thirst at many streams ;
 The day to night for solacement in dreams,
 There is no thing in all creation free :
 One needs the other—all depend on God.
 The bird looks for its lodgement to the tree,
 The tree must fix its roots beneath the sod.
 Then, heart-I-love, no more in pride refuse
 My willing service—all I have to give.
 Were it for this alone, I still would choose,
 In spite of pain and poverty, to live.
 Brooklyn, N. Y.

Dependence

By Julie M. Lippmann

HIGH heaven stoops to draw the ocean-mist,
The lowly land looks skyward for its rain ;
The seasons need the sun to keep their tryst
With earth, and make the dour world glad again.
Deep-hidden well-springs feed the hungry soil,
The river slakes its thirst at many streams ;
Night turns to day for realty and toil,
The day to night for solacement in dreams.

There is no thing in all creation free :
One needs the other—all depend on God.
The bird looks for its lodgement to the tree,
The tree must fix its roots beneath the sod.
Then, heart-I-love, no more in pride refuse
My willing service—all I have to give.
Were it for this alone, I still would choose,
In spite of pain and poverty, to live.

The word "EDITORIAL" is written in a large, ornate, serif font. To the left of the word is a decorative illustration of a lamp of knowledge, with a flame, surrounded by laurel wreaths and other foliage. The entire scene is enclosed in a decorative, scroll-like border.

Gladness in Teaching

If the gospel is glad news, it should be proclaimed in glad tones. A Sunday-school lesson may be taught, or a testimony of Christian experience given, in tones so indifferent or dolorous that the hearer wholly misjudges the joyful nature of salvation. The gospel is a pean of victory. To give any one the impression, by our tones or expression, that we are uttering mere condolences, or chanting a dirge, is to do what ?

Dicotyles - There are
 several good skins
 from Brownie and from
 Paul Co. in One Horn
 Cell. I did not see the skulls.
 Leontideus - I saw three skins
 + two heads from Ft. Verde.

The Voice of Skunk is more
 variable, sometimes brown
 all black, or with a
 more trace of the longitudinal
 line of white on the upper
 side of the head. The
 normal color of the upper
 surface is grayish
 white - white externally and
 blackish under the
 surface. The tail is
 always very long and
 the angle of body smaller
 than in *Mephitis mephitis*
 the latter ~~is~~ ^{is} ~~more~~ ^{more}
 considerable with spots
 on the chest or elsewhere
 on the lower surface.
